PTR Annual Data Summary - Rural Stations	10
PTR Annual Data Summary - Urban Stations	18
Annual Average Daily Traffic (AADT) Volumes - Rural Stations - 2004 – 2013	25
Annual Average Daily Traffic (AADT) Volumes - Urban Stations - 2004 – 2013	33
The Expansion of Short-Duration Count Data to AADTs	40
Conversion Factors – Average Weekday Traffic (AWDT) to AADT - Rural Stations – 2013	41
Conversion Factors – Average Weekday Traffic (AWDT) to AADT - Urban Stations – 2013	45
FERRY SYSTEMS AND TOLL CROSSINGS	
Ferry Systems Operated in Washington State - 2004 – 2013	48
Toll Crossings of the Columbia River - 2004 – 2013	48
ANNUAL VEHICLE MILES OF TRAVEL (AVMT)	
AVMT Definition and Trends	49
State Route AVMT Summary by County (All Vehicles) - 2013	50
State Route AVMT Summary by County (Trucks and Buses) - 2013	54
ANNUAL AVERAGE DAILY TRAFFIC VOLUMES	58
COUPLET SKETCHES	211

INTRODUCTION

The Washington State Department of Transportation (WSDOT) is responsible for the administration of approximately 7,000 miles of roadway involving large annual expenditures for planning, design, construction, and maintenance. This requires having reliable and current traffic volume information, vehicle type classification information, and travel statistics throughout the state. Data collected by WSDOT to meet these needs are provided in this report at a summary level.

Report Contents

The Annual Traffic Report contains Annual Average Daily Traffic (AADT) volumes for the years 2010 through 2013. AADTs are included only at locations where actual traffic counts have been conducted in one or more of the last four years. An asterisk or plus sign placed beside a traffic volume signifies that the AADT was derived from a traffic count conducted during the year it is provided for. All other volumes shown in this report are estimates based on traffic counts conducted in prior years and factored to an AADT using patterns from Permanent Traffic Recorder (PTR) stations. Blanks in the traffic volume portion indicate that no traffic volume data is available.

Note that because estimated AADTs are sometimes revised for accuracy as new data becomes available, previous years' traffic volumes provided in this report may not always reflect those found in prior publications.

This report also provides truck percentages derived from data collected at PTR stations. This information is based on from nine to twelve months of data (depending on availability), and represents estimated annual percentages for the locations they are provided for. Truck percentages are separated in to three types: single, double, and triple units. Single units consist of two- and three-axle trucks and buses. Double units consist of trucks with a trailer. Triple units consist of trucks with trailer combinations. The total truck percentage will not always match the sum of each truck type since percentages are stored electronically rounded to the nearest hundredth, but provided in this report rounded to the nearest whole percent.

Traffic volume and truck percentage data for design purposes should be obtained through specific requests directed to the Travel Data and Analysis Branch, at (360) 570-2421. For other traffic-related inquiries, please contact the Short Count Evaluation and Processing Office, at (360) 570-2381.

Additional Contents

At the beginning of this report is a list of PTR stations and maps of their locations, as well as a summary of 2013 data from these recorders. Among other statistics, the summary provides average weekday (Tuesday through Thursday) and average weekend day (Friday through Sunday) traffic volumes.

This report also includes a ten-year history of AADTs for PTR sites, Ferry Systems, and Toll Crossings. Data from these are used in the calculation of seasonal traffic variations and in the estimation of AADTs from mechanical counts of 48 or 72 hours in duration. Integral to performing these estimations is the use of Average Weekday to Annual Average

Daily Traffic conversion factors, which are provided for PTR locations where sufficient data was collected in 2013.

Finally, the report includes vehicle miles traveled data for the state highway system.

TRIPS (Transportation Information and Planning Support System)

The roadway information contained within this report is presented using the coding scheme employed by the TRIPS mainframe computer system, which is used to store, maintain and report information about the State Highway system. Within TRIPS, each mainline State Route is identified using a three digit number. Non-mainline portions of a route are uniquely identified through the additional use of a Related Roadway Type and Qualifier.

The Related Roadway Types found in this document are AR (Alternate Route), CO (Couplet), RL (Reversible Lane), SP (Spur), and HI / HD (Grade Separated HOV Lanes carrying traffic in the increasing and decreasing direction of mileposting respectively).

Because multiple roadways can be assigned the same route number and type, Related Roadway Qualifiers are used as an additional descriptor. For example: 155SPOMAK indicates that this spur of State Route 155 is in Omak.

Traffic volumes at mainline State Route locations with couplets are identified by a "C" printed under the column heading "COUPLET". In most cases traffic volumes at these locations, as well as on the couplets themselves, represent a single direction of travel. Couplet sketches are included in the back of the report.

At each location the state functional class of the highway is listed. These are 1 (Principal Arterial), 2 (Minor Arterial), 3 (Collector) and 5 (Interstate).

The leg identification for traffic volume data is found in the location's description. At intersections the leg is defined as before or after, based on the increasing direction of mileposts. This publication reflects the state highway system as of December 2013.

Americans with Disabilities Act (ADA) and Title VI Information

It is the Washington State Department of Transportation's (WSDOT) policy to assure that no person shall, on the grounds of race, color, national origin or sex, as provided by Title VI of the Civil Rights Act of 1964, be excluded from participation in, be denied the benefits of, or be otherwise discriminated against under any of its federally funded programs and activities. Any person who believes his/her Title VI protection has been violated, may file a complaint with WSDOT's Office of Equal Opportunity (OEO). For additional information regarding Title VI complaint procedures and/or information regarding our non-discrimination obligations, please contact OEO's Title VI Coordinators, George Laue at (509) 324-6018 or Jonte' Sulton at (360) 705-7082.

This material can be made available in an alternate format by emailing the WSDOT Diversity/ADA Affairs team at wsdotada@wsdot.wa.gov or by calling toll free, 855-362-4ADA(4232). Persons who are deaf or hard of hearing may make a request by calling the Washington State Relay at 711.

THE EXPANSION OF SHORT-DURATION COUNT DATA TO AADTS

With the exception of Annual Average Daily Traffic (AADT) volumes provided for those locations with a Permanent Traffic Recorder (PTR), which record traffic data continuously, the AADTs in this report are based off 48- or 72-hour weekday mechanical traffic counts. Because traffic volumes fluctuate in relation to both the day of the week and the time of year, the volume data derived from a short-duration count must be statistically adjusted in order to provide an accurate estimate of the AADT for the location the count was taken. This is done by multiplying the Average Weekday Traffic (AWDT) volume from a short-duration count by a conversion factor produced by dividing the AADT of a PTR by the AWDT of the PTR for the month in which the short-duration count was taken. These factors, which are commonly referred to as monthly seasonal factors, are listed on the following pages.

The determination of which PTR's factors to use for the short-duration counts on a given section of roadway is based on the apparent degree to which the traffic patterns at the PTR mirror those of the section of roadway under consideration. Proximity to the PTR, as well as similarities in traffic volumes and roadway type, are used in identifying locations that should display similar patterns. In some instances however, a section of roadway cannot reliably be assigned to the factors from an individual PTR. In such cases, assignment is made to one of several factor groups that reflect generalized patterns for broad geographic and roadway-type categories through the use of averaged factors from multiple, representative PTRs. The factor groups currently in use are:

- GR-01: Urban Interstate
- GR-02: Urban Non-Interstate
- GR-03: Non-Recreational Rural Interstate
- GR-04: Rural Central Mountain (Moderate Recreational Influence)
- GR-05: Non-Interstate, Non-Recreational Rural West
- GR-06: Non-Interstate, Non-Recreational Rural East (Agricultural Influence)
- GR-07: Non-Interstate, Non-Recreational Rural Northeast
- GR-08: Non-Interstate, Non-Recreational Rural Southeast
- GR-09: Rural Central Mountain (Strong Recreational Influence)
- GR-10: Recreational West

The charts to the right graphically depict typical changes over the course of a year in the factor groups' monthly seasonal factors; changes that are roughly inverse to the annual rise and fall in averaged traffic volumes for the PTRs composing these groups. As can be seen, urban roadways display less variation than do rural roadways, which are much more impacted by seasonal variations in agriculture- and recreation-related traffic. However, the highest degree of seasonal variation is displayed by factor groups GR-04, GR-09 and GR-10. These are composed of PTRs that record data for locations where recreational travel represents a substantial component of total annual traffic volumes.

ANNUAL VEHICLE MILES OF TRAVEL DEFINITION AND TRENDS

Annual Vehicle Miles of Travel (AVMT) is the number of miles traveled by all vehicles on a given portion of the road network in a year. The following pages provide 2013 AVMT figures for the state highway system broken down by county, functional class of roadway, and urban versus rural location. The number of miles traveled by all vehicle types is presented first, followed by the number of miles traveled by trucks and buses only.

Of note when reviewing historic AVMT trends are the large urban AVMT increases and associated rural AVMT decreases that occurred in 2004 and 2013. However, these sharp changes do not reflect sudden shifts in the driving habits of Washingtonians. Instead, these divergent trends are primarily due to a change in the amount of roadway within each category as determined by the 2000 and 2010 U.S. Censuses.

Also of note, although not captured in the table to the right, is the 8% decrease in truck and bus AVMT between 2012 and 2013. However, this drop does not reflect decreased truck traffic within the state. Instead, it is almost exclusively the result of a refinement to WSDOT's traffic counting equipment that significantly reduced the misclassification of 2-axle 4-tire pickups with long wheel-bases as heavy trucks. It is anticipated that similar decreases in truck AVMT will occur in 2014 and 2015 as all traffic counting locations have vehicle classification data updated using the improved equipment.

State Highway AVMT in Thousands

Year	Rural	Urban	Total	Change
1987	8,470,452.8	12,214,210.3	20,684,663.1	4.9%
