## Appendix II. Urban Corridor Area

- A. Fish Passage Barriers Inventoried as of February 2009

## Introduction

Restoration of declining salmon and trout populations ranks high in the development of management plans for streams, lakes, and wetlands in Washington State. One of the major problems facing salmon and trout populations is an inability to utilize their historic rearing and spawning grounds due to fish passage barriers that block access to habitat. To rectify this, the Washington Department of Fish and Wildlife (WDFW) and the Washington Department of Transportation (WSDOT) have worked cooperatively since 1991 to inventory and correct fish barriers at state highway crossings.

Prior to 1991, WSDOT addressed the correction of fish passage barriers as required by Hydraulic Project Approvals (HPA) issued for highway construction and maintenance projects. In 1991, in cooperation with the Washington State Legislative Transportation Committee, WSDOT committed funding from its Highway Construction Program to develop an inventory of fish passage barriers to anadromous fish species at state highway crossings. WSDOT contracted with Washington Department of Fisheries (prior to the merger of Washington Departments of Fisheries and Wildlife) to conduct the inventory and habitat studies necessary to prioritize state route barriers for correction.

This report summarizes WSDOT's fish passage barrier correction plan. Included in this report are fish passage corrections performed during road projects and those conducted with dedicated fish passage barrier correction funds (I-4 funds) since 1991. WSDOT barrier corrections completed in 2008, long-term scoping and planning for future barrier corrections, and fish use evaluations of planned and completed fish passage barrier projects are reported for each of the six WSDOT management regions.

## Fish Passage Inventory

Prior to the merger of Washington Departments of Fisheries and Wildlife in 1994, the WSDOT culvert inventory was salmon-centric; fish passage barrier assessments and physical surveys were conducted on streams with a gradient of up to seven percent, which marked the presumed upper limit of salmon habitat. Stream crossings located upstream of the point where the stream gradient exceeded the seven percent were not inventoried. Subsequent to the merger, fish passage barrier inventories were expanded to include higher gradient steelhead trout habitat. The first gradient changes were implemented in July 1995. Following these changes, all culvert evaluations and physical surveys were done on streams with up to 12 percent gradient.

Since 1991, WSDOT and WDFW inventoried, conducted habitat studies, prioritized, and corrected 225 fish passage barriers in Washington streams. As a result of those combined efforts, access has been restored to over 2,431,269\* square meters of potential salmonid habitat, or, over 1,125 linear kilometers (699 miles) once blocked by fish passage barriers. The potential salmonid habitat implies the habitat that would be available to salmonids provided that no other man-made fish passage barriers existed in a given watershed.

\* The amount of habitat once-blocked by barriers was determined during habitat surveys or estimated using Geographic Information System (GIS) software for sites that were lacking habitat surveys.

In February 1998, WDFW increased the gradient criteria from 12 to 20 percent in order to include resident fish and to adhere to the current Forest Practices Rules. Under the new criteria, all fish bearing stream crossings were to be assessed. In 1998, WSDOT contracted with the WDFW to commence a more extensive inventory of barrier crossings using the current fish passage criteria (WDFW Fish Passage Barrier and Surface Water Diversion Screening Assessment and Prioritization Manual 1998, revised 2000).

In October 2007, the expanded inventory was completed on the entire state route system of 11,335.45 kilometers (7,043.52 miles). The results of the inventory are shown in Table 1.

WDFW reviews upcoming transportation projects and provides WSDOT with advance notice of fish passage barriers in the project boundaries to facilitate the integration of fish passage barrier repairs within road construction projects. WDFW works closely with the WSDOT regional offices to review sections of highways within project areas and forwards the results to the appropriate WSDOT regional office.

WDFW Fish Passage Barrier and Surface Water Diversion Screening Assessment and Prioritization Manual can be accessed on the web at <http://wdfw.wa.gov/hab/engineer/fishbarr.htm>.

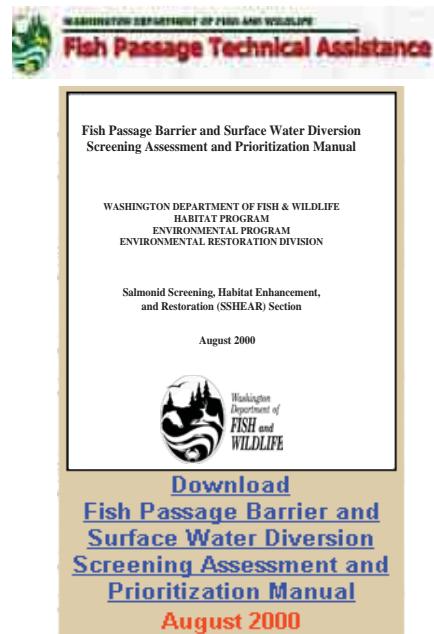

Table 1. Number of Fish Bearing Crossings and Barrier Crossings Requiring Fish Passage Repair Based on the WSDOT Expanded Fish Passage Inventory as of February 2009.

Fish-bearing Stream Crossings	Fish Passage Barriers		Crossings with Unknown Barrier Status	Barriers with Significant Habitat Gain	Barriers with Limited Habitat Gain <sup>1</sup>	Barriers with Habitat Threshold Gain Not Determined	Barriers Fixed <sup>2</sup>
3,175	Total Barriers (0 Passable)	Partial Barriers (33 or 67 Passable)	15	1,462	400	31	225
	900	993					

<sup>1</sup> Barriers that do not meet current WDFW threshold habitat gain criteria to justify correction using dedicated funding until higher priority barriers are corrected.

<sup>2</sup> Two hundred and twenty-five WSDOT fish passage barriers have been reported as replaced or retrofitted for fish passage however, 49 of those require additional work to meet current fish passage criteria (See Tables 4 and 5).

## Fish Passage Inventor dates

During the WSDOT inventory, 6,478 crossings in natural drainages were inspected. The inspected crossings included all the culverts and other features associated with WSDOT highways and rights-of-way, such as road fills, streambed controls, and dams.

- Of the 6,478 crossings over natural drainages, 3,175 were identified as crossings in fish bearing streams.
- Approximately 60% (1,893) of the examined fish bearing crossings were identified as barriers (Table 1). Out of the 1,893 barriers, 900 are total barriers to fish passage and 993 provide limited fish passage.
- Additionally, 15 crossings require further analysis to determine fish passage barrier status.
- Seventy-seven percent of known barriers (1,462) have a significant habitat gain (at least 200 m) and will be prioritized for correction using dedicated fish passage barrier correction funds.
- Another 400 barriers with limited habitat gain (less than 200 m) will be considered for correction once the high priority barriers are corrected, or they may be corrected during road maintenance or safety and mobility projects, or when they fail.
- Thirty-one fish passage barrier crossings are scheduled for verification of significant habitat gain.

## Habitat Assessment

As a basis for prioritization of fish passage restoration projects, a habitat assessment is conducted for all identified WSDOT fish passage barriers. Four methods of habitat assessment have been used: Full Physical Survey (FS), Reduced Sampling Full Physical Survey (RSFS), Threshold Determination (TD), and Expanded Threshold Determination (ETD), per the WDFW Fish Passage Barrier and Surface Water Diversion Screening Assessment and Prioritization Manual, August 2000 (located on the Internet at: <http://www.wdfw.wa.gov/hab/engineer/fishbarr.htm>). The Full Physical Survey qualifies and quantifies habitat based on the measurements taken during the survey of the entire stream, the ETD method estimates the quantity and quality of the habitat: based on the measurements taken within 200 meters of the culvert, while the TD verifies the existence of a significant reach of habitat without a gradient or a natural barrier either downstream or upstream of a fish passage barrier crossing. To expedite the prioritization process, all habitat assessments since 2005 have been performed using a RSFS. The only difference between the FS and the RSFS is the number of samples collected per stream reach. Only one sample per reach is taken during a RSFS regardless of the reach length, provided that the habitat characteristics remain unchanged throughout the reach.

A complete list of all the WSDOT-owned fish passage barriers is included in Appendix A provided for each WSDOT region.

A significant reach is defined as a section of stream having at least 200 linear meters of habitat without a gradient or natural point barrier.

## Regional Statistics

WSDOT has six geographic management regions Northwest, North Central, Olympic, Southwest, South Central, and Eastern (See Figure 1). Within the geographical area of the Northwest Region, WSDOT has established the Urban Corridors Office (UCO) that develops, designs, and delivers a program of Seattle area projects. Barrier culverts identified for UCO projects are included in Appendices IA and IIIA as a part of a complete regional barrier inventory. However, in order to illustrate how many of the WSDOT owned barriers are located in the highly urbanized Puget Sound corridor, the barrier culverts identified for UCO projects are presented separately in Appendix II A. All of these barriers are also accounted for in the totals listed for the Northwest and Olympic regions -- the geographic areas in which the UCO projects are located (See Table 2).

A summary of fish passage barrier assessment of the entire state route system in Washington State is shown in Table 2. For a complete list of fish passage barriers refer to Appendices I provided for each WSDOT region.

Table 2. Fish Passage Barrier Assessment in Six WSDOT Regional Management Areas.

WSDOT Region	Fish-bearing Crossings	Fish Passage Barriers	Barriers with Significant Habitat Gain	Barriers with Limited Habitat Gain <sup>1</sup>	Barriers with Habitat Threshold Gain Not Determined	Crossings Repaired <sup>2</sup>
Northwest	946	564	416	143	5	106
North Central	199	133	96	32	5	15
Olympic	912	594	467	125	2	63
Southwest	671	354	266	77	11	23
South Central	145	65	54	5	6	6
Eastern	302	183	163	18	2	12
<b>Total</b>	<b>3,175</b>	<b>1,893</b>	<b>1,462</b>	<b>400</b>	<b>31</b>	<b>225</b>

<sup>1</sup> Barriers that do not meet WDFW current 200 m threshold habitat gain criteria to justify correction using dedicated funding until higher priority barriers are corrected.

<sup>2</sup> Two hundred and twenty-five WSDOT fish passage barriers have been replaced or retrofitted, however, 49 of those require additional work to meet current fish passage criteria (See Tables 4 and 5).

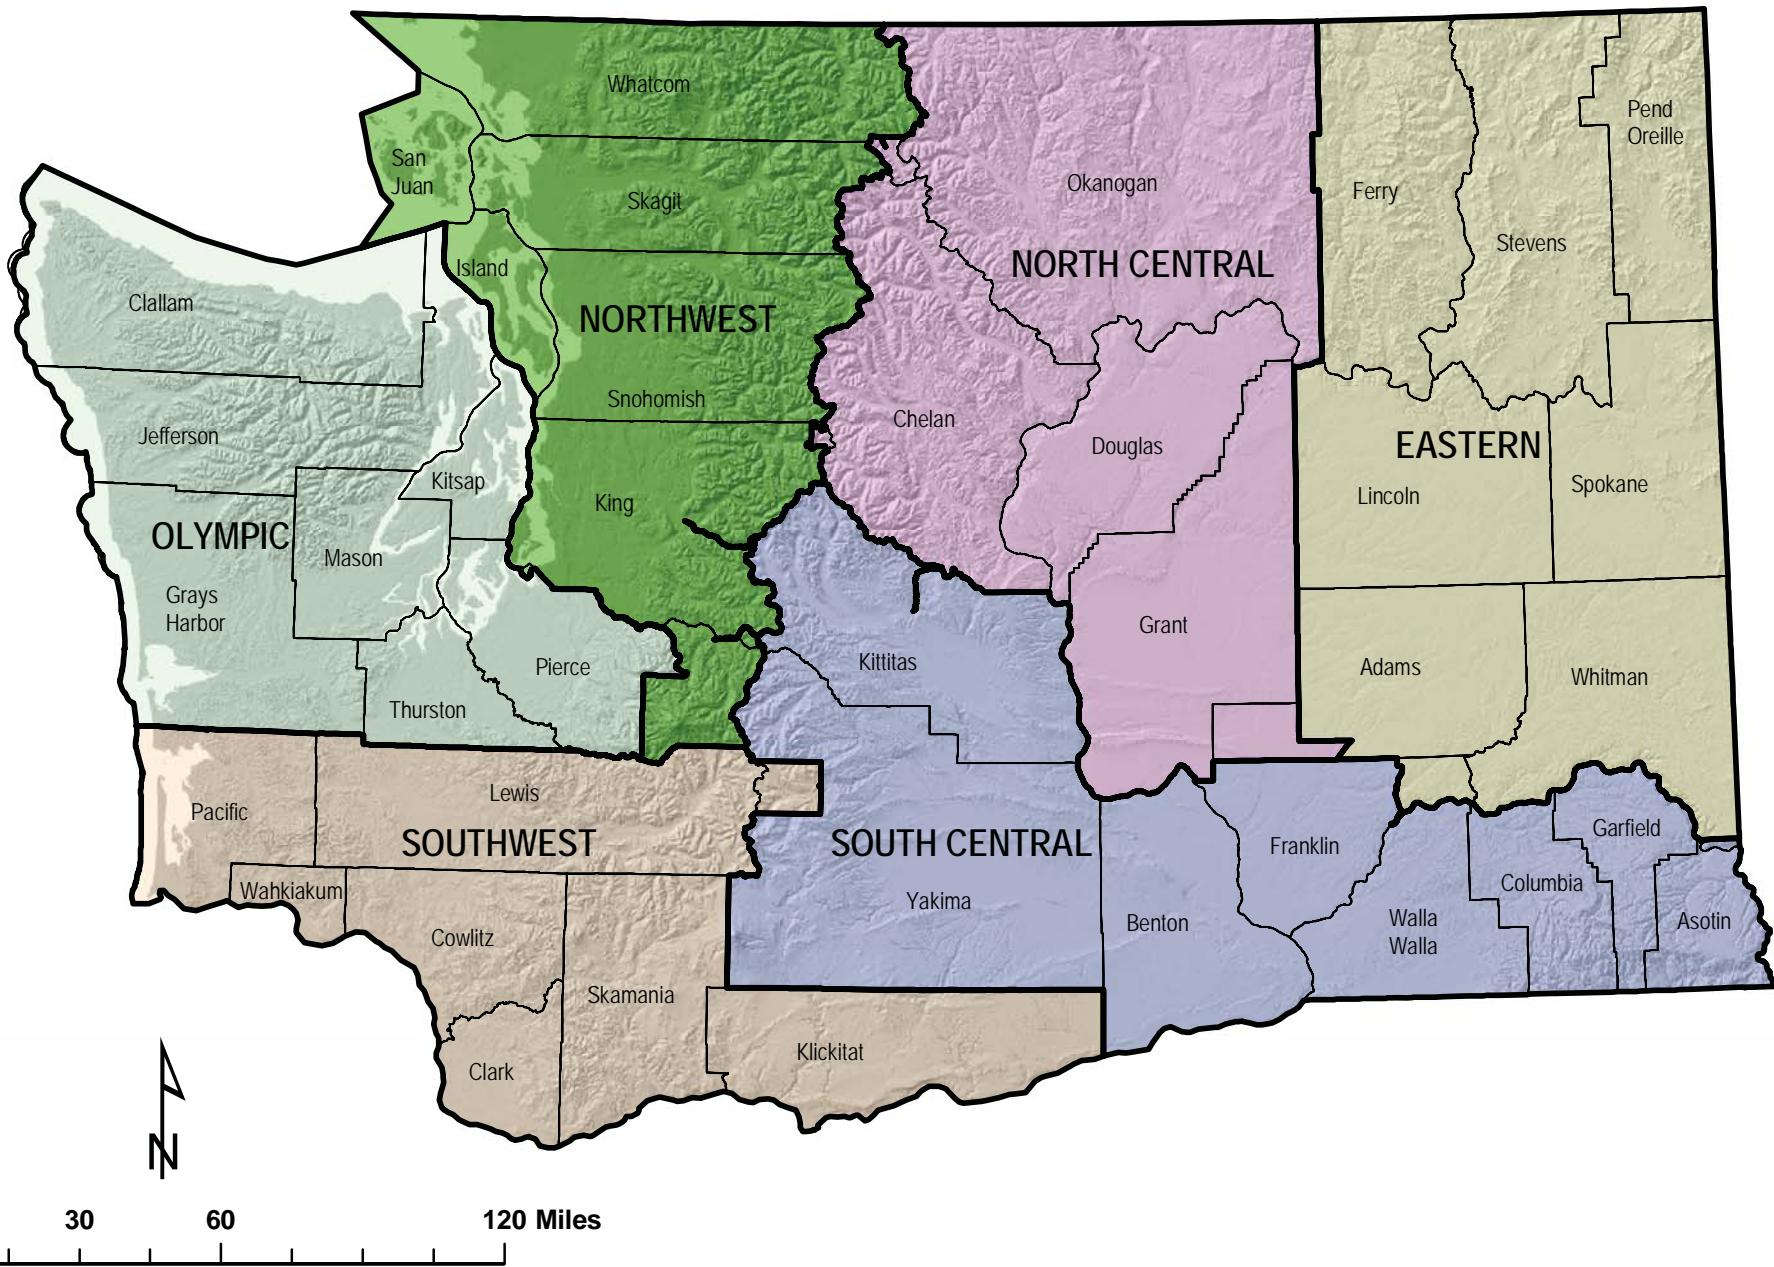

Figure 1. WSDOT Regions.

## WSDOT Fish Passage Barrier Correction Plan

WSDOT approaches fish passage barrier correction in three ways:

- First, each biennium, the Legislature appropriates funds for stand-alone correction projects to address some of the highest priority barriers. These “dedicated correction” projects are part of the WSDOT Environmental Retrofit Program.
- Second, when WSDOT plans a highway safety or mobility project, it reviews the project area for barrier correction opportunities. Barrier culverts that require a Hydraulic Project Approval (HPA), will be corrected as part of the highway construction project. If no HPA is required, WSDOT evaluates whether barriers within the project boundary can be corrected more efficiently as part of the highway project.
- And third, some fish passage barriers are corrected as a result of routine maintenance on failing culverts. Generally, however, corrections completed through maintenance are small-scale repair projects and do not typically include a full culvert replacement.

Fish passage barrier correction at any given site does not assume that the upstream habitat will immediately be used by salmonids. In some cases, salmonids will start utilizing stream reaches previously blocked by barrier culverts almost immediately. In other cases, it may take many years before newly opened habitat is fully utilized. Additional factors, other than the loss of stream habitat caused by fish migration barriers, can affect fish production. Other problems threatening salmonid habitat include pollution resulting from stormwater runoff, surface water diversions, hydropower, unfavorable ocean conditions, predation, and general habitat degradation or loss.

Fish passage problems in Washington are shared among federal, state, tribal, county, city, and private culvert owners. The 1,893 WSDOT-owned fish barriers identified during the WSDOT Fish Passage Inventory are estimated to block more than 5,516\* linear kilometers (3,428 miles) of potential salmonid habitat. Other, non-WSDOT barriers within the 5,516 km of blocked habitat also need to be corrected to fully realize the potential habitat gain.

\* The amount of habitat blocked by barriers was derived from habitat surveys or estimated using Geographic Information System (GIS) software for sites that were lacking habitat surveys.

In Washington, WSDOT is responsible for an estimated 11,335.45 kilometers (7,043.52 miles) of highways, while counties are responsible for an estimated 86,904 kilometers (54,000 miles) and cities for an additional 26,055 kilometers (16,190 miles) of roads (Washington State County Road Administration Board).

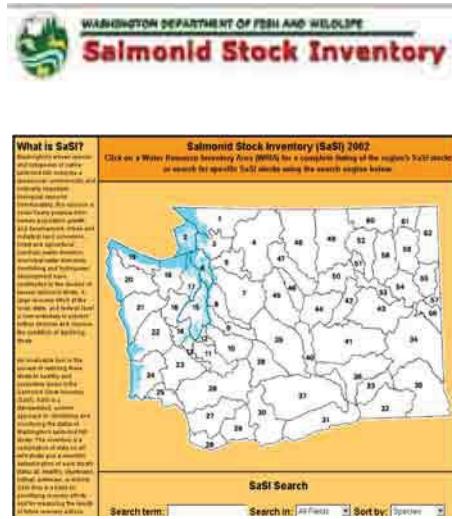

## **Stand Alone Fish Passage Barrier Correction with Dedicated I Funding**

Each biennium, through legislative appropriation, dedicated funding within the WSDOT Environmental Retrofit Program (I-4) budget is set aside to provide for correction of high priority fish passage barriers identified during the WSDOT inventory. Stand-alone fish passage barrier correction projects are prioritized to provide the largest gains in habitat and the greatest production benefits for both anadromous and resident fish species. Among the many factors determining a project's priority are amount of habitat gained, degree of passability improvement, species-specific production potential of the gained habitat, mobility of the species present, stock status of species present (WDFW Salmonid Stock Inventory, SaSI ), and cost of the project. All the factors are consolidated in a numeric Priority Index (PI) model and contained within the WDFW Fish Passage and Diversion Screening Inventory (FPDSI) Database providing an objective, relative priority ranking for each project.

## **Ten Year Planning Document**

At the request of WSDOT, WDFW prepares a prioritized list of fish passage projects to be evaluated and constructed over the next five biennia. This list serves as a resource for planning and coordination with the recognition that the actual level of project design and construction is dependent on funding. The Ten Year Plan is the result of a process of project evaluation, scoping, development of conceptual designs, and budgeting. The Ten Year Plan is regularly updated as projects are identified, prioritized, scoped, and refined. Project scoping is a multi-phased process that is carried out by WDFW biologists, environmental engineers, WSDOT headquarters and regional staff.

Washington Department of Fish and Wildlife. 2003. Salmonid Stock Inventory (SaSI) 2002. Olympia, WA. Available at <http://wdfw.wa.gov/fish/sasi/>.

The current (as of February 2009) Ten Year Plan document can be found in Table 3.

Table 3. Ten Year Planning Document

## Plan Notes-

- 1) This plan is intended to show interested parties where WSDOT is targeting its resources for high priority fish passage projects now and in the future.
- 2) The potential projects shown in the plan have all been pre-scoped with WDFW for a potential solution and a cost estimate was generated by WSDOT.
- 3) The funded portion of the plan is 2007-09 (carry over) and 2009-11 only. The rest of the plan is subject to future funding by the Washington State Legislature.
- 4) This plan shows not only I4 funded projects but also other fish passage projects funded by other sources within WSDOT.
- 5) Three projects that were to be constructed in 2008 (SR 101 Lee's Cr, SR 109 Unnamed Trib to Pacific, and US 101 Chicken Coop Cr) were moved to the future. Two of the projects went above their construction budget and one was moved to the future (Chicken Coop Cr) because of landowner issues. Five new projects were picked up for design with the resulting savings.
- 6) Two projects were moved from construction in 2007-09 to 2009-11 because of design and permitting delays.

## Fish Passage Project Scoping Process

**Each fish passage barrier correction project undergoes a multi-phased pre-scoping process.** The first step in this process involves verification of inventory and habitat assessment data. Next, WDFW biologists confirm completion of inventory work and prioritization effort for all barrier culverts within the watershed and verify that habitat conditions and species expected to benefit are correctly reflected in the PI for each barrier. In addition to the PI, other factors for fish passage project selection, such as location and the number of additional human-made barriers in the watershed, project feasibility, likelihood for success, other restoration efforts in the watershed, and project costs are also considered. All the information gathered during the biological scoping process is summarized in a biological scoping report and a map is generated illustrating the location of additional human-made barriers located downstream and upstream of the WSDOT barrier. Once biological scoping is complete, projects that successfully meet the verification process have a WDFW scoping engineer assigned to develop conceptual designs for barrier correction. If the PI drops below the current scoping threshold as a result of changes the biologist makes, the project is deferred until higher priority projects are completed. Some projects that require correction of other fish passage barriers or that require correction of habitat deficiencies in the watershed prior to a development of a correction strategy may be placed on hold.

Once the WDFW scoping engineer has identified all reasonable conceptual design options, a pre-scoping meeting is held. Participants in this meeting are, at a minimum, the WDFW scoping biologist, scoping engineer and area habitat biologist (AHB). WSDOT participants include the regional scoping

Appendix C of each WSDOT region includes all the fish passage barriers that are currently being scoped by WDFW.

engineer and representatives of the Environmental Services Office, Regional Program Management, Regional Environmental Office, and Regional Project Development Office. The outcome of this meeting is a consensus decision on which conceptual design option will be pursued. A stakeholder concurrence form is generated that documents the outcome of the meeting and includes the cost estimate for the selected design option. Once each participant present at the meeting reviews and concurs with the information on the concurrence form, pre-project scoping is complete and the project is eligible to be placed on the Ten Year Plan. Figure 2 outlines the complete scoping, design, and barrier removal process through the I-4 program.

### WSDOT Fish Passage Barriers Corrected with I-4 (Stand-Alone) Dedicated Funding

Since 1992, 72 fish passage projects at high priority sites have been completed by WSDOT and WDFW's Technical Applications (TAPPS) Division using dedicated funding for stand-alone barrier corrections (see Table 4). No fish passage barriers were corrected in 2008 with dedicated funding (I-4 subprogram).

## Fishways

In addition to culverts, WSDOT owns and maintains 159 fishways statewide. Regular inspections and maintenance are essential in the continued successful operation of fishways. Eighty-nine fishways are currently considered durable and efficient, providing 100% fish passage, and as such have been placed on a regular inspection schedule. Among the routinely inspected fishways are fishways that require frequent maintenance for fish passage but are not fish passage barriers. Fishways that are barriers to fish passage and cannot be improved by routine maintenance are taken off the inspection schedule and placed on the barrier list. Just like the rest of the fish passage barriers, the barrier fishways are included in the scoping and prioritization process that will ultimately lead to their repair or replacement. Seventy such fishways have been placed on the fish passage barrier list.

The current list (as of February 2009) of barrier fishways and non-barrier fishways that need maintenance for fish passage can be found in Appendix B for each WSDOT region.

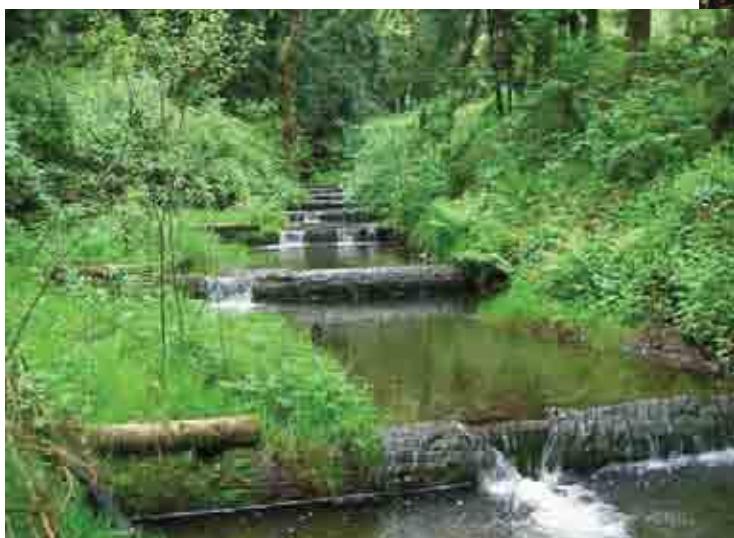

Figure 3. An example of an efficient fishway at Tibbetts Creek on SR 900 that provides complete passage to coho and sockeye salmon, steelhead, resident, and searun cutthroat trout. The fishway, built in 1999, consists of a combination of seven steel baffles and 12 log controls.

Figure 4. An example of a failed fishway at Holder Creek on SR 18 that has been placed on the barrier list and is no longer inspected. The fishway consists of one steel and 19 concrete baffles. The outfall drop is now over one meter high, obstructing fish passage for coho salmon, and steelhead, resident and searun cutthroat trout.

## **WSDOT Transportation Improvement Projects (Barriers Identified as Part of Highway Safety and Mobility Projects)**

Integration of fish passage repairs with road project construction is a cost-effective way to accelerate barrier correction and reduce mobilization costs. WDFW and WSDOT integrate fish passage barrier correction into planned WSDOT transportation improvement projects whenever possible.

Prior to the completion of the inventory of the WSDOT highway system in 2007, WDFW conducted expedited inventories of fish passage barriers within the boundaries of upcoming safety and mobility projects. The inventories took place at least one year prior to the anticipated construction dates to accommodate WSDOT transportation project long-range budgeting and planning requirements. Every other year, WDFW requested and received a list of proposed transportation projects from each of the six WSDOT regions. WDFW examined the milepost vicinities of upcoming transportation projects and scheduled an inventory of the project area if needed. Following the inventory, WDFW provided a list of identified fish passage barriers within the proposed transportation project to the appropriate WSDOT region. All fish passage barriers within the upcoming transportation project area should be considered for correction, including barriers with limited habitat gain that are not considered for correction with dedicated funding (I-4 subprogram). The need to carry on transportation project reviews has been eliminated with the conclusion of the state-wide inventory in October 2007, however, additional ad hoc transportation reviews will be performed if needed in the future.

### **Consultation**

It is important that WSDOT notify WDFW's Technical Applications Division (TAPPS) whenever a WSDOT fish passage barrier is scheduled for correction, or has been corrected during road construction or routine maintenance. WDFW TAPPS will schedule an inspection of all WSDOT fish barrier corrections and update the fish passage database to accurately reflect the status of corrected WSDOT fish passage barriers and include them in the annual progress report.

Additional data regarding fish passage barrier status within project vicinity can be obtained by contacting WDFW Fish and Wildlife Biologist, Eva Wilder e-mail [Eva.Wilder\\_dfw.wa.gov](mailto:Eva.Wilder_dfw.wa.gov) phone (360) 902-2411.

## **Evaluation of Stand-Alone I-4 Retrofit Projects, Before and After Barrier Removal**

The goal of the evaluation program is to accomplish the following

- Determine fish utilization upstream and downstream of sites prior to and one year after project construction.
- Evaluate new fish passage projects for design, durability, and efficiency for one year following construction.
- Provide long-term effectiveness monitoring of selected sites to evaluate various design options and the changes in fish utilization over an extended period of time.

WDFW evaluates I-4 stand alone fish passage barrier correction projects to ensure they are functioning properly. All projects completed by WSDOT are evaluated for one year following construction. During this period, any design deficiencies are noted and corrected whenever possible.

Adult spawner surveys are a direct way to determine species presence or absence above and below a newly completed fish passage project or to evaluate a pre-project barrier. Three such surveys are conducted per year for each project. Typically, the surveys are conducted 500 meters below and above the project, or to the confluence with a larger body of water downstream, or to a natural barrier upstream. If there is no spawning habitat within 500 m upstream or downstream of the fish passage project, the survey may be relocated according to where fish are likely to spawn.

If resources allow, adult surveys may be conducted in subsequent years if salmonids are not detected upstream of the fish passage project in the first year after construction.

On a select number of sites, representing various fish passage design options, adult spawner surveys and fish passage structure assessments will occur over an extended period. This will provide insight into the long-term adult utilization patterns and the durability and efficiency of various design options.

Currently, four crossings, representative of different designs have been chosen for long-term monitoring Moose Creek at SR 530, Fairchild Creek on US 101, South Branch Big Creek on US 101, and Dogfish Creek on SR 307. No fish were observed upstream of Moose Creek crossing at SR 530 during the 2008 October and November spawner surveys. Live and dead spawning salmon were observed during November surveys in Fairchild Creek. One live adult coho salmon and two dead ones were observed in South Branch Big Creek tributary during a November 2008 survey. At a stream simulation culvert at Dogfish Creek that was built in 2007, 115 live and 318 dead chum were seen during a November 2008 survey (see Figure 5), while six live, 403 dead chum, and four live and one dead coho salmon were observed during December survey.

Three dead adult coho salmon and four coho redds were observed upstream of the 2007 Swamp Creek fish passage projects at I-5 and I-405 during a spawner survey in November 2008 and one adult coho salmon was observed in January 2009.

For a full list of spawner surveys conducted for dedicated funding projects that will be built in the near future, projects that were built in 2007, as well as long-term monitoring projects refer to Appendix D of a given WSDOT region.

*Figure 5. Adult coho salmon were observed in Dogfish Creek during a spawner survey in 2008.*

## **Barriers Corrected in the Course of WSDOT Transportation Projects**

WDFW identified one hundred fifty-three fish passage barriers that were corrected by WSDOT during **transportation and other projects since 1955**. Eight fish passage barriers were corrected in 2008 during road improvement projects. Two culverts on SR 539 were replaced with fully fish passable culverts during a road widening project: Deer Creek (Figures 6, 7, and 8) and an unnamed tributary to Baker Creek (Figures 9 and 10). A culvert on Filbert Creek was replaced with a fully passable arch culvert (Figures 11, 12, and 13). A barrier culvert on Meadow Creek was replaced with a bridge (Figures 14, 15, and 16). A failing barrier culvert on SR 900 at an unnamed tributary to Tibbetts Creek was replaced with a fish passable culvert during a road widening project in 2008 (Figures 17, 18, and 19). During the construction of a new interchange at I-5 and SR 502, WSDOT replaced an undersized culvert at Gee Creek with a fish passable culvert (Figures 20 and 21). A fish barrier culvert on an unnamed tributary to the Snohomish River was replaced with a fish passable culvert during an emergency road repair on SR 96 (Seattle Hill Rd., Figures 22, 23, and 24). As a part of a 2007 project involving a bridge replacement at Boulder Creek and a culvert replacement at an unnamed tributary to Boulder Creek, on a rights-off-way access road off SR 542 was abandoned and a culvert on an unnamed tributary to Boulder Creek was removed in 2008 (Figures 25 and 26).

# Deer Creek

## Before Construction

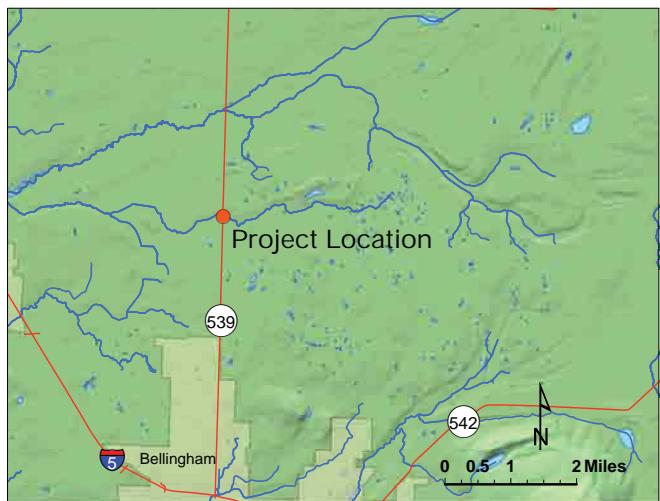

Figure 6. Deer Creek - Project location: SR 539 at milepost 4.30, north of Bellingham.

Figure 7. A concrete box culvert, 1.22 m (4 ft) wide was assessed as a barrier to fish passage due to 2% slope.

## After Construction

Figure 8. In 2007 the box culvert was replaced with a 4.95 (16 ft) m wide concrete box culvert. This project improved fish access to 7.6 km (4.7 mi) of upstream habitat for chum and coho salmon, steelhead, searun, and resident cutthroat trout.

## Unnamed tributary to Baker Creek

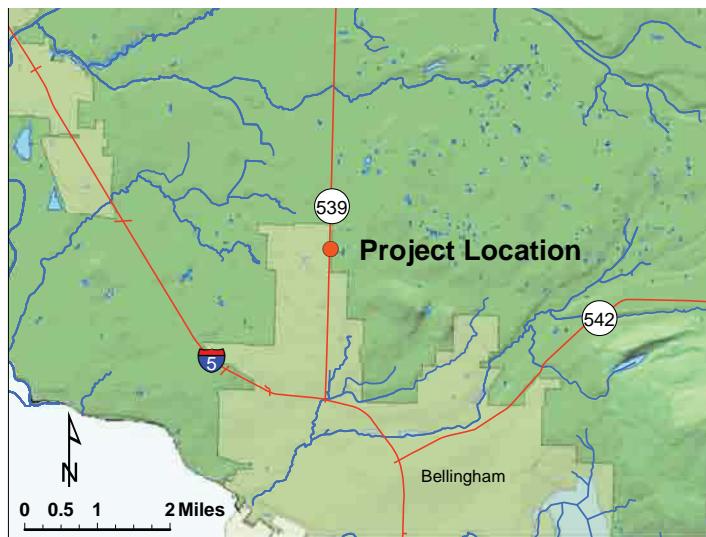

Figure 9. Unnamed tributary to Baker Creek - Project location: SR 539 at milepost 2.06, north of Bellingham.

### After Construction

Figure 10. An undersized, 0.61m (2 ft) wide culvert was replaced during a widening project with a 1.86 m (6.1 ft) wide concrete box culvert. The project restores approximately 0.4 km (0.25 mi) of habitat for coho salmon, steelhead, searun, and resident cutthroat trout.

## Filbert Creek

### Before Construction

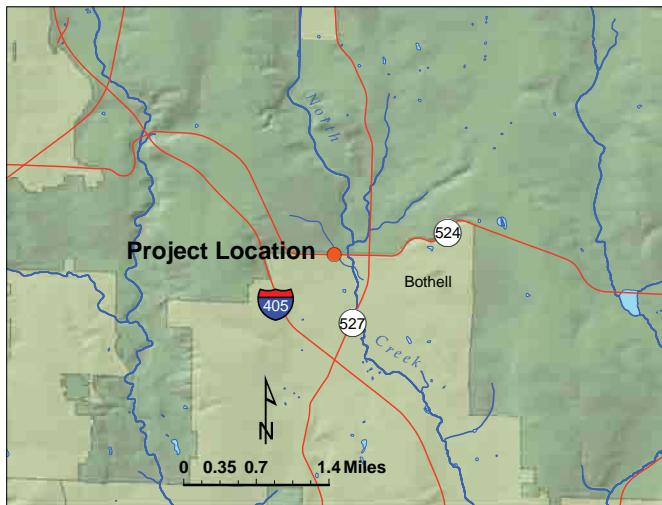

Figure 11. Filbert Creek - Project location: SR 524 at milepost 9.10, north of Bothell.

Figure 12. A round concrete culvert, 0.46 m (1.5 ft) in diameter was a barrier due to a 2.9% slope.

### After Construction

Figure 13. WSDOT replaced the smaller round culvert with a bottomless concrete culvert, 4.43 m (14.5 ft) wide. This project improved access to approximately 1.1 km (0.68 mi) of upstream habitat for coho salmon, and steelhead, searun, and resident cutthroat trout.

# Meadow Creek

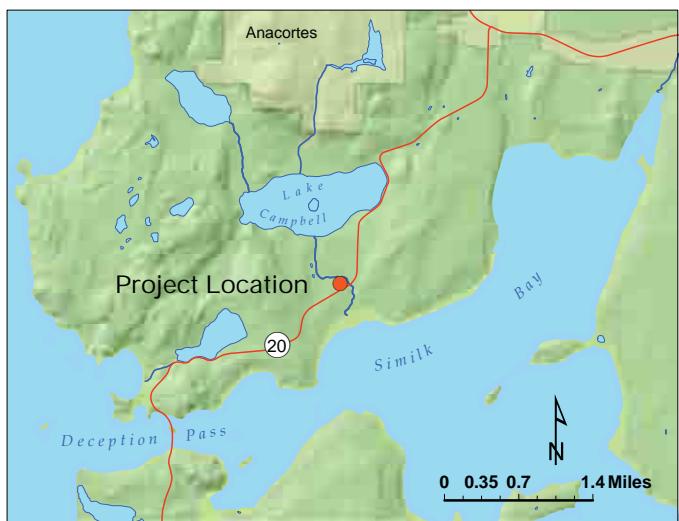

Figure 14. Meadow Creek - Project location: SR 20 at milepost 44.74.

## Before Construction

Figure 15. A round culvert, 1.22 m (4 ft) in diameter was considered a fish passage barrier due to a slope of 1.3%.

## After Construction

Figure 16. The Meadow Creek culvert was replaced jointly by WSDOT, Samish Indian Nation, and Skagit County with a bridge that improves fish access to over 8.2 km (5.1 mi) of habitat for chum and coho salmon, steelhead, searun, and resident cutthroat trout.

## Unnamed tributary to Tibbetts Creek

### Before Construction

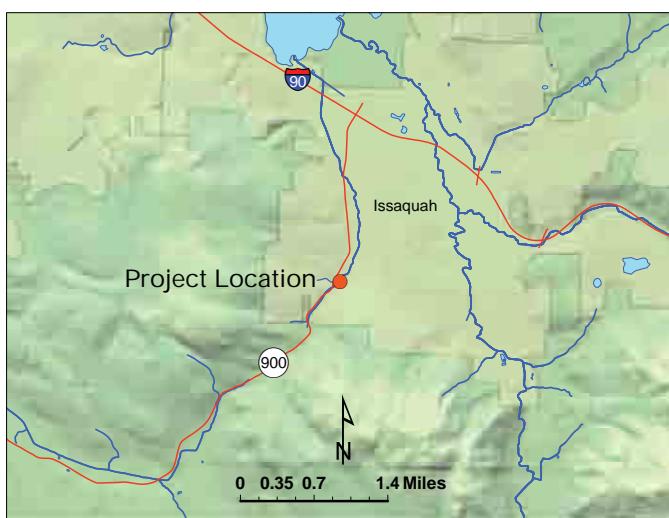

Figure 17. Unnamed tributary to Tibbetts Creek - Project location: SR 900 at milepost 20.09, in Issaquah.

Figure 18. A concrete box culvert, 1.22 m (4 ft) in diameter was considered a fish passage barrier due to an excessive outfall water surface drop and a slope of 1%.

### After Construction

Figure 19. The barrier culvert was replaced with an 8.2 m (26.9 ft) box culvert with natural stream bed material placed inside. The new crossing improves fish access to over 0.2 km (0.12 mi) of habitat for coho salmon, steelhead, searun, and resident cutthroat trout.

## Unnamed tributary to Gee Creek

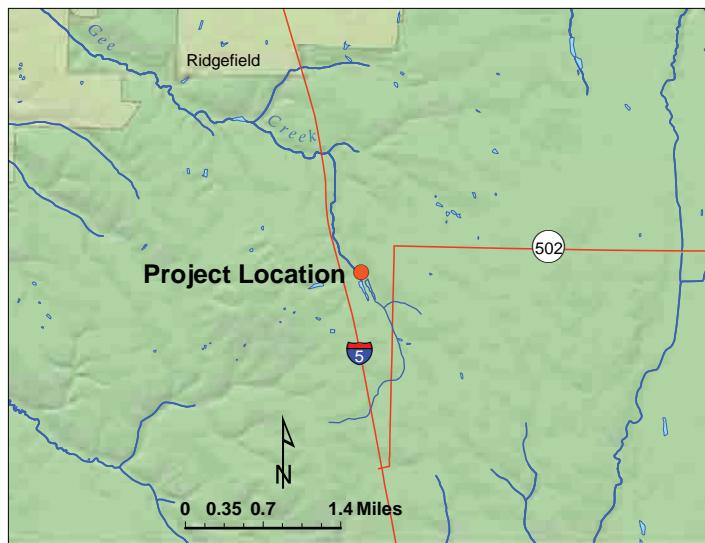

Figure 20. Unnamed tributary to Gee Creek - Project location: I-5 off ramp to Gee Creek rest area at milepost 11.

### After Construction

Figure 21. The new, 3.35 m (11 ft) wide corrugated steel culvert replaced an undersized, 1.22 m (4 ft) culvert restoring fish access to almost 2.2 km (1.3 mi) of upstream habitat for coho salmon, searun and resident trout.

## Unnamed tributary to Snohomish River

### Before Construction

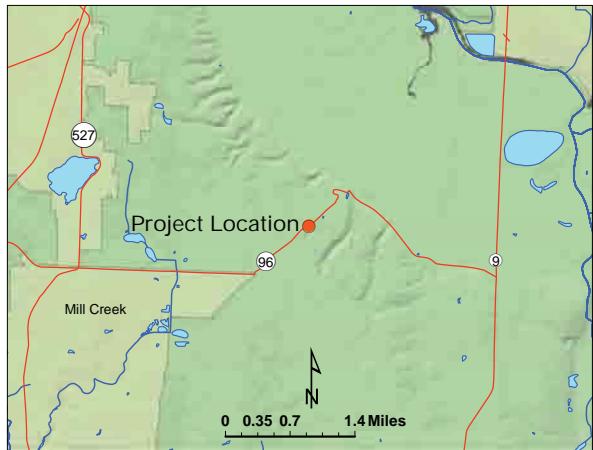

Figure 22. Unnamed tributary to Snohomish River - Project location: SR 96 at milepost 3.96, northeast of Mill Creek.

Figure 23. A concrete box culvert 1.22 m (4 ft) in diameter was considered a fish passage barrier due to an excessive water surface drop and a slope of 1%

### After Construction

Figure 24. A 3.1 m (10.2 ft) wide concrete box culvert with natural streambed material throughout the culvert was installed during an emergency road repair. The new crossing improves fish passage to coho salmon, steelhead and resident cutthroat trout.

## Unnamed tributary to Boulder Creek

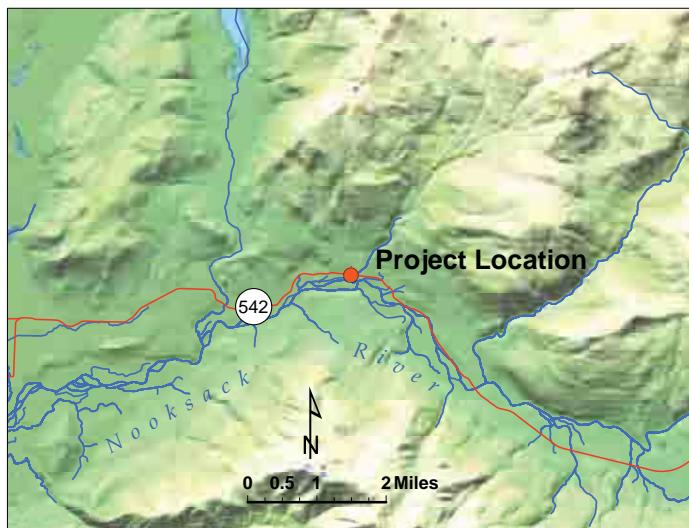

Figure 25. Unnamed tributary to Boulder Creek - Project location: SR 542 ROW at milepost 28.29.

### After Construction

Figure 26. A round corrugated steel culvert, 1.7 m (5.6 ft) in diameter, with 6.4% slope was removed from a right-of-way access road during a road widening project. Coho salmon, steelhead and resident cutthroat trout have an unobstructed access to over 0.5 km of habitat upstream.

## Commonly Asked Questions about WSDOT Fish Passage Barrier Culverts

### ***How can I find out if there are fish passage barriers in my project area?***

A list of WSDOT fish passage culverts can be found in the WSDOT Fish Passage Inventory Annual report, which is located on WSDOT's Biology Program Webpage. For additional information please contact:

- Jon Peterson - WSDOT Fish Passage Coordinator 360-705-7499 or peterjn@wsdot.wa.gov
- Eva Wilder - WDFW Fish and Wildlife Biologist 360-902-2411 or Eva.Wilder@dfw.wa.gov

### ***What is a PI?***

PI stands for Priority Index and is a numeric indicator used to consolidate the many factors related to a fish barrier removal project (such as expected passage improvement, production potential of the blocked stream, fish stock health, etc.). The PI is used for developing prioritized lists of stand-alone fish barrier removal projects. Stand-alone fish barrier removal projects are prioritized by WDFW to target sequential correction of barriers that have the largest gains in fish habitat and the greatest production benefits for fish (higher the PI the greater the benefits). The PIs for most culverts are listed in the WDFW database and are included in the Appendix C of each WSDOT region.

### ***What if a culvert barrier does not have a PI? Does that mean the culvert is a low priority?***

It means that WDFW inventoried the culvert but has not yet completed the habitat assessment work necessary to calculate the PI. The PI plays an important role in the prioritization of I-4 Fish Barrier removal projects; however, it should not be a factor in deciding which culverts are replaced as part of a highway project.

### ***What about a culvert that is listed as a partial barrier – does it still need to be fixed?***

The culvert is still considered a barrier. The percent passability is factored into the PI. A partially passable culvert will have a lower PI than a totally impassable culvert with all other factors being equal.

### ***A culvert on a highway project has a low PI. Does this mean that it doesn't need to be fixed?***

If a transportation (safety or mobility) project involves work on a fish barrier culvert that requires a Hydraulic Project Approval (HPA), then WSDOT is required to fix the barrier as part of that project.

### ***What if there is conflicting information about whether a culvert within a project boundary is a barrier or not – what should be done to resolve this?***

Contact Jon Peterson at WSDOT or Eva Wilder at WDFW to determine if the culvert is a barrier or not.

### ***A fish passage barrier culvert within a project's limit has less than 200 meters of habitat upstream from the culvert. Does it need to be fixed?***

If work on the culvert requires an HPA then yes, the culvert needs to be corrected or replaced. The

minimum 200 meters of habitat criteria is used for stand-alone culverts being corrected using I-4 funds and not those being fixed as part of a highway construction project.

***Should a fish passage barrier culvert that will cost several million dollars be replaced with a fish passable one if it only provides access to a very short degraded section of stream that ends in a storm water pond?***

In very rare cases, an exception may be made if it is determined that a barrier correction requiring an HPA would provide an extremely minimal gain for fish and require extraordinary high cost. Consideration of this exception would require agreement with WDFW and would not be based on the presence of other human-made barriers in the stream. In this case, it is understood that WSDOT is ultimately responsible to correct the barrier in the future, and would be required to provide mitigation to compensate for the habitat loss resulting from the presence of the barrier until it is corrected.

***While getting ready to complete permitting for a project, two new fish barrier culverts were discovered. There are no funds left in the project; can I-4 funds be used to fix these culverts?***

This question emphasizes the importance of early identification of deficiencies that need to be fixed as part of any highway safety and mobility construction project. I-4 funds are not available to fix culverts that would ordinarily be fixed as part of a highway construction project (no matter when they are found in the project process). This would defeat the purpose of having a stand-alone program targeting the highest priority culverts that would otherwise not be corrected during a highway project anytime in the near future.

***A project office has been assigned to design a fish passable culvert. Are there any guidelines to help in designing this project?***

Design of fish barrier correction is based on the latest version of WDFW's Design of Road Culverts for Fish Passage manual (available on line at <http://dfw.wa.gov/hab/engineer/cm>). Engineering assistance and guidance is also available by contacting WDFW's Technical Applications Division.

***Does a barrier culvert within a road project that does not need an HPA need to be fixed as part of this highway project?***

Serious consideration should be given to correcting the barrier, even though WSDOT is not required to do so. The cost of the barrier correction relative to the overall cost of the project should be considered. Also, in this case, the quantity and quality of the upstream habitat should be considered in making the decision. Relatively few fish passage barriers are fixed under the I-4 Fish Passage Program. Opportunities to correct barriers should be capitalized on during projects while crews and equipment are mobilized to significantly reduce the number of fish passage barriers under state highways. If the barrier is not fixed during the road project, it remains on the barrier list and must be fixed at some point in the future. Sometimes avoiding fixing the culvert during the current highway project may make future corrections more difficult and costly, if for example, the current project buries the culvert with fifty feet of fill or blocks it with a retaining wall.

***The plans to widen the road over a fish passage barrier culvert include construction of vertical retaining walls to avoid touching the culvert and an HPA. Is that OK?***

Technically the answer is yes. If a project does not require an HPA there is no requirement to make the culvert fish passable. However, project offices should carefully consider the cost of making it passable at some future date after the construction of the retaining walls. The barrier will need to

be fixed eventually, so any action taken to avoid correcting the barrier will only add to the cost of making it passable in the future. It may make more sense to fix the culvert now than to triple the cost of fixing it when another project comes along in a few years that can't avoid an HPA and must make the culvert fish passable.

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

**Codes Used for Culvert Shape**

ARCH - bottomles arch

SQSH - squash

RND - round

BOX - rectangular

ELL - ellipse

OTH - other

**Codes Used for Culvert Materials**

PCC - precast concrete

CST - corrugated steel

SST - smooth steel

CAL - Corrugated aluminium

SPS - structural plate steel

SPA - structural plate aluminium

TMB - timber

MRY - masonry

OTH - other

PVC - plastic

Appendix IB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
990376	I-405	19.12	Forbes Cr	08.0242	67	29-Sep-08	Annual	SBC	MNR	Some of the newly installed weirs do no meet criteria and need to be reset.
08.0070 A 0.25	I-405	26.46	Perry Cr	08.0070 A	67	14-Oct-04	Discontinued - UB	BC	MNR	Recommended replacement of a missing baffle to eliminate sheetflow at the culvert outlet.
03.0181 0.50	I-5	219.41	Fisher Cr	03.0181	67	13-Oct-04	Discontinued - UB	BC	MNR	More baffles are needed below the downstream most baffle to correct a depth problem for fish access. Expansion ring baffles were recommended.
990025	I-5	244.2	Barnes Cr	03.0036	33	13-Jan-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
995411	I-5	246.75	Chuckanut Cr	01.0626	0	26-May-04	Discontinued - UB	BC, SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
990022	I-5	256.28	Baker Cr	01.0553	33	25-May-04	Discontinued - UB	BC, SBC	MNR	Recommended replacement with a new culvert.
992978	I-5 NB Exit 256	256.34	Baker Cr	01.0553	67	25-May-04	Discontinued - UB	BF	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
08.0183 1.60	I-90	18.83	EF Issaquah Cr	08.0183	33	13-May-94	Discontinued - UB	SBC	MNR	The middle sackrete control is deteriorating and threatening to blow out. It needs to be repaired or replaced.
105 R042117a	SR 164	8.24	Pussywillow Cr	10.0048	67	17-Mar-08	Annual	BC	MNFP	Several weirs are leaking. Repair or replace leaking weirs.
996277	SR 18	0.29	unnamed to WF Hylebos Cr tributary	10	67	02-Mar-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.

Appendix IB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
990390	SR 18	8.9	Soosette Cr	09.0073	67	03-Mar-08	Discontinued - UB	SBC	MNR	Outfall drops at log controls underneath the bridge exceed fish passage criteria. An engineering review is needed to determine correction option.
990173	SR 18	22.16	Holder Cr	08.0178	0	30-Dec-03	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
07.0396 0.80	SR 18	25.67	Deep Cr	07.0396	33	22-Apr-97	Discontinued - UB	BC, SBC	MNR	The culvert baffles are badly deteriorated, and velocities in combination with outfall drop block coho and juveniles. Rebuilding is needed. Engineering required.
105 R071916a	SR 410	48.29	Boundary Cr	10.0250	33	29-Dec-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
997679	SR 509	25.69	Miller Cr	09.0371	67	25-Aug-05	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
994459	SR 520	4.48	unnamed to Lk Washington	08.0257	33	30-Dec-03	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
990430	SR 522	2.86	Thornton Cr	08.0030	67	20-Sep-99	Discontinued - UB	BC, PC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
08.0077 0.20	SR 527	6.57	Penny Cr	08.0077	33	14-Jul-08	Discontinued - UB	BC, SBC	MNR	The box culvert is not backwatered sufficiently to eliminate sheet flow in the upper half (at least).
990294	SR 528	2.47	Munson Cr	07.0073	67	16-Jan-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.

Appendix IB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
990644	SR 530	31.01	unnamed to NF Stillaguamish R	05	67	16-Jan-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
991059	SR 531	8.71	MF Quilceda Cr	07	67	15-Jan-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
05.0018 2.00	SR 532	6.14	Church Cr	05.0018	67	13-Oct-04	Discontinued - UB	SBC	MNR	More downstream controls and baffles are needed to correct an excess drop at the downstream most log control and to correct sheetflow in the culvert at low flows.
01.0228 4.80	SR 542	6.55	Anderson Cr	01.0228	67	22-Oct-08	Annual	BC, WP	MNR	Frequent gravel accumulation fills the pools completely, compromising efficient fish migration through the facility.
990316	SR 9	1.16	Cutthroat Cr	08.0083	67	11-Mar-08	Discontinued - UB	SBC	MNR	The plank controls need to be removed. An engineering review in progress to address the best way to remove the controls.
991122	SR 9	48	Gribble Cr	03.0227	33	21-Feb-06	Discontinued - UB	BC	MNR	Culvert is undersized and baffles are insufficient. More baffles are necessary for fish passage, and culvert replacement is recommended.
991210	SR 99	6.86	WF Hylebos Cr	10.0014	67	20-Apr-06	Discontinued - UB	BC, SBC	MNR	The outfall drop at the fifth log control down from the culvert is now at 0.46m (18"). The rock (bed) control is totally washed out. The problem may continue to get worse and should be corrected.

Appendix IB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
07.0939 0.40	US 2	23.08	Wagleys Cr	07.0939	33	19-Aug-03	Discontinued - UB	WP	MNR	Remove the old dam and fishway structure to allow fish passage. The fishway is totally non-functional. Flow goes under most of the structure, and the wooden components have deteriorated to the point of leaking everywhere.

**Fishway Type:**

**BF** - baffled flume

**BC** - baffled culvert

**SBC** - streambed control

**WP** - weir pool

**PC** - pool-chute

**CC** - concrete control

**Condition:**

**MNR** - requires replacement

**MNFP** - requires maintenance  
for fish passage

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

#### Codes Used for Culvert Shape

ARCH - bottomles arch

SQSH - squash

RND - round

BOX - rectangular

ELL - ellipse

OTH - other

#### Codes Used for Culvert Materials

PCC - precast concrete

CST - corrugated steel

SST - smooth steel

CAL - Corrugated aluminium

SPS - structural plate steel

SPA - structural plate aluminium

TMB - timber

MRY - masonry

OTH - other

PVC - plastic

Appendix IIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
994035	SR 20	278.6	Bonaparte Cr	49.0246	67	24-Oct-07	Annual	SBC	MNR	Rock controls do not completely backwater the culvert and do not address the sheetflow problem. An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
990882	SR 28	22.72	Lynch Coulee	41	0	23-Jan-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
990202	US 97	158.32	Iron Cr	39.1209	67	04-Oct-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.

**Fishway Type:**

**BF** - baffled flume

**BC** - baffled culvert

**SBC** - streambed control

**WP** - weir pool

**PC** - pool-chute

**Condition:**

**MNR** - requires replacement

**MNFP** - requires maintenance  
for fish passage

Appendix IIIA. WSDOT Fish Passage Barriers Inventoried as of February 2009

Site Id	Road	MP	Stream Name	WRIA	Barrier	% Fish Pass	SR <sup>1</sup>	PI	Culv # <sup>2</sup>	Shape	Material	Span (m)	Rise (m)	Length (m)	WS Drop (m)	% Slope	Lineal Gain (m)	Rearing Area (m <sup>2</sup> )
999499	US 12	319.35	Touchet R	32	Yes	67	Yes		2.2	ARCH	CPC	16.5	3.88	6.8	0.32	1.92		
999499	US 12	319.35	Touchet R	32	Yes	67	Yes		1.2	ARCH	CPC	16.5	4	6.4	0.35	3.57		

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

**Codes Used for Culvert Shape**

ARCH - bottomles arch

SQSH - squash

RND - round

BOX - rectangular

ELL - ellipse

OTH - other

**Codes Used for Culvert Materials**

PCC - precast concrete

CST - corrugated steel

SST - smooth steel

CAL - Corrugated aluminium

SPS - structural plate steel

SPA - structural plate aluminium

TMB - timber

MRY - masonry

OTH - other

PVC - plastic

Appendix IIIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
997705	I-5	109.69	College Cr	13	0	03-Mar-09	Discontinued - UB	WP	MNR	Single timber and steel plank do not effectively backwater the long culvert. An engineering review is needed to determine correction option.
14.0021 0.30	SR 108	11.9	Little Cr	14.0021	100	03-Mar-09	Triennial	BC, SBC	MNR	The baffles have filled in with bedload and are not passable. Major modification to the baffle network is needed for a temporary fix.
991270	SR 109	36.43	unnamed to Pacific Ocean	21.0715	67	12-Oct-04	Discontinued - UB	WP	MNR	Replace blown out streambed control, and replace or baffle culvert to eliminate velocity problem at upper end.
990144	SR 112	48.49	Field Cr	19.0026	67	09-Dec-03	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option.
990480	SR 112	49.48	Whiskey Cr	19.0020	33	27-Jan-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
991516	SR 16	20.36	unnamed to Burley Cr	15	33	12-Dec-03	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
991867	SR 16	20.44	unnamed to Burley Cr	15	33	12-Dec-03	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
105 R050320a	SR 167 NB Exit 8	12.05	Jovita Cr	10.0033	67	09-Mar-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
15.0229 0.10	SR 3	40.96	Chico Cr	15.0229	67	04-Mar-09	Discontinued - UB	BC	MNR	Install two additional baffles at the head end of the culvert to eliminate sheet flow. Current depth is app. 0.3'. Chum salmon are now having great difficulty negotiating this section of the culvert.

Appendix IIIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
996742	SR 3	41.52	unnamed to Dyes Inlet	15.0241	0	15-Jul-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
996745	SR 3	41.81	unnamed to Dyes Inlet	15	0	20-Jul-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
996747	SR 3	42.21	unnamed to Dyes Inlet	15.0243	0	20-Jul-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option, e.g., new fishway or culvert replacement.
15.0246 0.96	SR 3	44.8	Strawberry Cr	15.0246	67	12-Sep-06	Discontinued - UB	BC, SBC	MNR	The downstream most sacrete weir is leaking severely and needs to be repaired.
996803	SR 3	47.72	unnamed to Clear Cr	15.0254	33	08-Aug-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option.
15.0051 0.10	SR 302	11.36	Little Minter Cr	15.0051	67	17-Nov-04	Discontinued - UB	BC, SBC	MNR	The addition of an upstream culvert baffle is needed to eliminate sheet flow. The outfall drop exceeds WDFW criteria for chum passage. Rock controls need to be replaced to accommodate chum.
15.0051 0.20	SR 302	11.42	Little Minter Cr	15.0051	67	17-Nov-04	Discontinued - UB	BC, SBC	MNR	Re-space the culvert baffles and add one to eliminate a sheet flow problem below the first interior baffle. Correct the leakage (read erosion) around the ends of the downstream plank controls.
15.0060 0.10	SR 302 ROW	16.09	Purdy Cr	15.0060	33	04-Mar-09	Annual	BC, SBC	MNFP	Remove woody debris from culvert inlet.
15.0280 1.00	SR 308	1.15	Big Scandia Cr	15.0280	67	18-Dec-07	Discontinued - UB	BC, SBC	MNR	There is a large log at the inlet end of the culvert/fishway that is partially blocking fish passage and poses some threat to the culvert due to potential further debris catching. It needs to be removed.

Appendix IIIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
991049	SR 507	36.35	Lacamas Cr	11.0022	33	25-Apr-06	Annual	SBC	MNR	An engineering review is needed to determine correction option.
22.0507 0.10	SR 8	5	MF Wildcat Cr	22.0507	33	08-Nov-06	Discontinued - UB	RCC	MNR	An engineering review is needed to determine correction option.
991690	US 101	111.9	unnamed to Stevens Cr	22	67	29-Apr-04	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option.
990178	US 101	146.85	Harlow Cr	21.0134	67	07-Jun-07	Discontinued - UB	BC, SBC	MNR	Replace apron baffle. Re-seal first downstream control.
990400	US 101	162.6	Steamboat Cr	20.0574	0	07-Jun-07	Discontinued - UB	BC	MNR	Install baffles in lower 2/3 rd of all three boxes. Log jam at creek mouth is gone, no longer a backwatering the culvert.
20.0312 0.60	US 101	197.1	Swanson Cr	20.0312	67	23-Oct-08	Ad Hoc	BC, SBC	MNR	An engineering review is needed to determine correction option.
18.0283 2.00	US 101	238.35	Indian Cr	18.0283	67	03-Nov-04	Discontinued - UB	BC	MNR	Currently, the primary problem w/the fishway is the 0.55 m drop over the entrance weir. Notch the baffle (requiring concrete cutting) to facilitate fish passage.
990448	US 101	246.4	Tumwater Cr	18.0256	67	29-Jul-08	Annual	BC	MNR	An engineering review is needed to determine correction option.
18.0234 1.10	US 101	250	Ennis Cr	18.0234	33	02-Oct-08	Annual	BC, WP	MNR	An engineering review is needed to determine correction option.
990240	US 101	250.5	Lees Cr	18.0232	0	28-Apr-04	Discontinued - UB	BC, PC	MNR	The culvert is 0% passable, due to slope and velocity problems, and will need to be replaced.
990021	US 101	253.85	Bagley Cr	18.0183	67	23-Oct-08	Annual	BC, SBC	MNR	Modification is needed downstream to lessen the 15" rock control drop.
18.0173 2.40	US 101	256.1	Siebert Cr	18.0173	67	29-Jul-08	Annual	BC, WP	MNR	An engineering review is needed to determine correction option.

Appendix IIIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
18.0021 5.40	US 101	260.93	Matriotti Cr	18.0021	67	03-Nov-04	Discontinued - UB	SBC	MNR	All the log controls below the SR 101 are leaking and/or dewatered and have failed. Engineering required to replace the existing logs and provide fish passage.
990219	US 101	267.18	Johnson Cr	17.0301	67	03-Nov-04	Discontinued - UB	BC, SBC	MNR	An engineering plan is required to address the existing 0.41 mter drop over the exposed/bedrock control.
115 MC093	US 101	346.95	Coffee Cr	14.0036	67	28-Apr-04	Discontinued - UB	SBC	MNR	High velocity was identified in the middle culvert and possibly in the other two culverts. Correction of the problem will require culvert replacement.

**Fishway Type:**

**BF** - baffled flume

**BC** - baffled culvert

**SBC** - streambed control

**WP** - weir pool

**PC** - pool-chute

**Condition:**

**MNR** - requires replacement

**MNFP** - requires maintenance

for fish passage

**Design Option:**

**Replacement/SS** - replacement of a barrier culvert with a stream simulation design culvert

**Replacement/NS** - replacement of a barrier culvert with a no-slope design culvert

**Biological Scoping Status:**

**Pending/PS** - Biological scoping is pending habitat physical survey

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

**Codes Used for Culvert Shape**

ARCH - bottomles arch  
SQSH - squash  
RND - round  
BOX - rectangular  
ELL - ellipse  
OTH - other

**Codes Used for Culvert Materials**

PCC - precast concrete  
CST - corrugated steel  
SST - smooth steel  
CAL - Corrugated aluminium  
SPS - structural plate steel  
SPA - structural plate aluminium  
TMB - timber  
MRY - masonry  
OTH - other  
PVC - plastic

Appendix IVB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
994532	SR 503	33.28	unnamed to Brooks Cr	27.0432	33	15-Dec-03	Discontinued - UB	BC	MNR	An engineering review is needed to determine correction option.
27.0305 1.00	SR 503 ROW	50.27	Ross Cr	27.0305	33	22-Jun-07	Discontinued - UB	BC	MNR	The culvert is undersized and poorly aligned w/a serious outfall problem. An engineering review is needed to determine correction option.
990753	SR 6	34	unnamed to Chehalis R	23	33	05-Apr-06	Discontinued - UB	SBC	MNR	The rock control does not sufficiently backwater the culvert. The culvert should be replaced.

**Fishway Type:**

**BF** - baffled flume

**BC** - baffled culvert

**SBC** - streambed control

**WP** - weir pool

**PC** - pool-chute

**Condition:**

**MNR** - requires replacement

**MNFP** - requires maintenance

for fish passage

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

#### Codes Used for Culvert Shape

ARCH - bottomles arch

SQSH - squash

RND - round

BOX - rectangular

ELL - ellipse

OTH - other

#### Codes Used for Culvert Materials

PCC - precast concrete

CST - corrugated steel

SST - smooth steel

CAL - Corrugated aluminium

SPS - structural plate steel

SPA - structural plate aluminium

TMB - timber

MRY - masonry

OTH - other

PVC - plastic

Appendix VB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/ Repair
990048	SR 129	0.9	Buford Cr	35.2307	67	01-Apr-08	Discontinued - UB	BC, SP	MNR	An engineering review is needed to determine correction option.

<sup>1</sup>SR - denotes a significant reach defined as a section of stream that is at least 200m long without a gradient or natural point barrier.

<sup>2</sup>The culvert # identifies individual culverts at multiple stream crossings. For example, in a triple culvert crossing, the first pipe would be 1.3, the second 2.3, and the third 3.3.

#### Codes Used for Culvert Shape

ARCH - bottomles arch

SQSH - squash

RND - round

BOX - rectangular

ELL - ellipse

OTH - other

#### Codes Used for Culvert Materials

PCC - precast concrete

CST - corrugated steel

SST - smooth steel

CAL - Corrugated aluminium

SPS - structural plate steel

SPA - structural plate aluminium

TMB - timber

MRY - masonry

OTH - other

PVC - plastic

Appendix VIB. WSDOT Fishways Needing Major Repair or Maintenance for Fish Passage.

Site Id	Road	Milepost	Stream Name	WRIA	% Fish Pass	Inspection Date	Inspection Frequency	Fishway Type	Fishway Condition	Recommended Maintenance/Repair
990351	SR 20	389.5	Renshaw Cr	62.0310	0	22-Jan-04	Discontinued - UB	SBC	MNR	An engineering review is needed to determine correction option.
990113	US 2	304.4	Deer Cr	55.0380	33	22-Jan-04	Discontinued - UB	BC, SBC	MNR	An engineering review is needed to determine correction option.

**Fishway Type:**

**BF** - baffled flume

**BC** - baffled culvert

**SBC** - streambed control

**WP** - weir pool

**PC** - pool-chute

**Condition:**

**MNR** - requires replacement

**MNFP** - requires maintenance  
for fish passage

Appendix VIC. WSDOT Dedicated Funding Project Scoping Progress Report as of February 2009.

SiteId	Road	Milepost	Stream Name	WRIA	Biological Scoping Status	PI	Engineer Scoping Status	Design Option 1	Cost Estimate 1	Design Option 2	Cost Estimate 2	On-Site Meeting Date	WSDOT Approval Date	On Ten Year Plan?	Project Year	Rearing Area (m <sup>2</sup> )

**Codes Used for Culvert Shape**

ARCH - bottomles arch  
 SQSH - squash  
 RND - round  
 BOX - rectangular  
 ELL - ellipse  
 OTH - other

**Codes Used for Culvert Materials**

PCC - precast concrete  
 CST - corrugated steel  
 SST - smooth steel  
 CAL - Corrugated aluminium  
 SPS - structural plate steel  
 SPA - structural plate aluminium  
 TMB - timber  
 MRY - masonry  
 OTH - other  
 PVC - plastic
